Education

University of Toronto – St. George Expected Apr 2028
Honours Bachelor of Science, Computer Science Specialist & Mathematics Major *3.74 / 4.0 GPA*

- **Selected Coursework:** Operating Systems, Computer Networks, Parallel Programming, Algorithm Design

Experience

Shopify May 2026 – Aug 2026
Software Engineer Intern *Toronto, ON*

- Drove an organization-wide migration of **500+ GitHub Actions workflows** to Shopify's **monorepo CI orchestration layer**, centralizing CI execution and boosting developer workflow resiliency during GitHub outages
- Optimized **Go** CI pipelines for Shopify's **internal Git service**, reducing median build time by ~**30%** and **saving 200+ compute hours** across 4,000+ builds per month while improving test stability and race-condition detection
- Developed a **Ruby merge-queue recovery agent** that detects PRs stuck in failed or stale states, automatically rebases, retries failed operations, and safely re-queues eligible PRs, reducing **p90 recovery time by 65%**

University of Toronto Machine Intelligence Student Team (UTMIST) Jan 2026 – Apr 2026
Software Engineer *Toronto, ON*

- Launched an authenticated **multi-tenant MCP gateway** for Agentiiv, connecting enterprise tools to AI agents
- Designed the cloud architecture and deployment across **9 containerized services** on **AWS ECS Fargate**
- Implemented **encrypted per-user OAuth** and **dynamic MCP tool discovery** for Google Workspace and Slack

University of Toronto Self-Driving Car Team (aUToronto) Sep 2025 – Apr 2026
Software Engineer *Toronto, ON*

- Developed the **human-machine interface** for an autonomous vehicle competing in the **GM/SAE AutoDrive Challenge**, delivering live perception, mapping, and localization data through a React-based GUI
- Implemented **roundabout guidance** using **ROS maneuver messages** and map-defined lane segments
- Built LiDAR, camera, and telemetry visualizations for vehicle simulations, testing, and QA

MPAC May 2025 – Aug 2025
Software Engineer Intern *Pickering, ON*

- Optimized **AWS resource provisioning** across DevOps, SecOps, and ITOps, cutting monthly costs by **$5,000**
- Architected **Kubernetes cluster deployments** hosting assessment platforms used by **10,000+ municipal staff**
- Led a **100GB+ PostgreSQL migration** from AWS RDS to Azure Flexible Server using parallel restore pipelines

Projects

StudyUp | *React, TypeScript, Supabase, Gemini, Vite* *study-up-pi.vercel.app*

- Shipped an AI workspace helping students centralize course materials with context-aware tutoring, study plans, and organizers
- Optimized document retrieval and prompt construction, reducing median tutoring-response latency by ~**35%**
- Won **1st place** and a **$10,000 USD prize** at the Lovable x UTMIST International Hackathon

Indus | *React, Ruby on Rails, Rust, Kafka, PostgreSQL, AWS* *tryindus.ca*

- Built a financial intelligence platform for live market research, portfolio analytics, and context-aware AI reports
- Engineered a **Rust and Kafka pipeline** processing **10K+ market events per second** with authenticated streaming and failure recovery
- Automated **multi-environment EKS deployments** using **Terraform, Helm, and GitOps**, adding workload identity, observability, and rollback controls

Technical Skills

Languages: C++, C, Python, Go, Java, SQL, TypeScript, JavaScript, Ruby
Frameworks & Libraries: React, Ruby on Rails, Node.js, Express, Flask, Django, FastAPI
Infrastructure & Tools: Unix/Linux, AWS (Certified Cloud Practitioner), Azure, GCP, Docker, Kubernetes, Terraform, Helm, GitOps, CI/CD, Kafka, Temporal, PostgreSQL, Redis, Bash
